The Honorable Rosa DeLauro
Ranking Member
Subcommittee on Labor, Health and Human
Services, Education & Related Agencies
United States House of Representatives
Washington, DC 20515

Dear Chair Capito, Ranking Member Baldwin, Chair Aderholt and Ranking Member DeLauro:

As organizations that care deeply about the health and well-being of our nation's children, we write to thank you for your past support for the Pediatric Mental Health Care Access (PMHCA) program at the Health Resources and Services Administration (HRSA), and to request \$31 million for the program in the FY26 Labor, HHS, Education (LHHS) appropriations bill. Thanks to funding from Congress and annual grants distributed by HRSA, there are 54 PMHCA programs helping children in 46 states, D.C., and several U.S. territories and tribal nations. These programs enhance access to mental health care for their patients, and the need couldn't be more urgent.

The American Academy of Pediatrics, American Academy of Child and Adolescent Psychiatry, and Children's Hospital Association declared a national emergency in child mental health in 2021ⁱ —a call echoed by over 140 other organizations.ⁱⁱ Suicide is a leading cause of death for youth in the United States.ⁱⁱⁱ In 2023, 29% of high school students reported experiencing poor mental health, 40% reported feeling persistently sad or hopeless, and 1 in 5 seriously contemplated suicide.^{iv} Additionally, approximately 18% of youth had a major depressive episode, yet many – about 40% of those youth – did not receive mental health treatment.^v The CDC also found a more than 50% increase in suspected suicide attempt emergency department visits among girls ages 12-17 in early 2021 as compared to the same period in 2019.^{vi} Behavioral health clinicians have reported over the last several years that children and adolescents are increasingly “boarding” in emergency departments for days because they do not have sufficient supports and services.

The PMHCA program supports pediatric primary care practices with telehealth consultation by child mental health teams, including child and adolescent psychiatrists, thereby increasing access to mental health services for children. The PMHCA program also enhances the capacity of pediatricians to screen, treat, and refer children with mental health concerns. Integrating mental health and primary care has been shown to substantially expand access to mental health care,

improve health and functional outcomes, increase satisfaction with care, and achieve cost savings.^{vii} Expanding the capacity of pediatric primary care providers to deliver behavioral health through mental and behavioral health consultation programs is one way to make more efficient use of the limited child mental health subspecialty workforce and to help ensure more children with emerging or diagnosed mental health disorders receive early and continuous treatment.

The HRSA PMHCA program is an effective investment in enhancing mental health care for children. A 2019 RAND study concluded that federal investments to substantially expand child psychiatric telephone consultation programs could significantly increase the number of children receiving mental health services.^{viii} In FY 2022, PMHCA grant awardees reported that over 10,000 enrolled primary care providers received training, and pediatric primary care providers who contacted their PMHCA mental health team served approximately 27,000 children and adolescents.^{ix} Providers participating in PMHCA programs report screening more patients in their practices and most agreed that more of their patients received needed treatment for a behavioral health condition as a result of participating in the program. Pediatric clinicians have also reported gains in skills, competence, and confidence in addressing patients' mental health care following engagement with PMHCA programs.

The PMHCA program was last reauthorized by Congress in 2022 as part of the *Bipartisan Safer Communities Act* (BSCA), which authorized \$31 million for the program each year in FY 2023-2027. The reauthorization also extended PMHCA program access to school-based health care providers and emergency departments. These are critically important sites for enhancing the availability of pediatric mental health team consultations because they are sites where children are often in need of care. The current appropriation of \$13 million has been supplemented by \$80 million in additional funding through the *American Rescue Plan Act* (ARPA) and BSCA. The supplemental funding has permitted HRSA to provide grant funding to programs in more states, territories, and tribal nations throughout the United States, as well as to stand up technical assistance. Unfortunately, the additional funding will be exhausted by the end of FY 2025, and the \$13 million in funding that has been proposed in HRSA's budget over the past few years will be insufficient to maintain the existing grant awards, much less grow the programs or expand to new jurisdictions.

Given the mental and behavioral health crisis our youth are facing, we urge you to include \$31 million for the program in the FY26 LHHS appropriations bill to allow HRSA to maintain the PMHCA program without severe cuts, and to prevent the abrupt discontinuation of critical child mental health care services.

Thank you for your consideration. Our organizations are grateful to you for your commitment to the mental health and well-being of our nation's families.

Sincerely,
