## Introduction

Data for this report came from the National GME Census or the GME Track, an online survey jointly sponsored by the Association of American Medical Colleges (AAMC) and the American Medical Association (AMA). Additional data was gathered from the ACGME Data Book and the NRMP Data Resource.

The uses of the Resident/Fellow Census are many. It supplies important workforce information to the field for planning and other needs including recruitment and retention efforts of training programs. The Census creates a yearly demographic picture of psychiatry residents, which can be used to assess our psychiatric workforce and its progress on metrics deemed relevant to the practice of psychiatry.

The data gathered from the GME Track survey report is based upon a 94.4% response rate in 2018 from programs accredited by ACGME for general, child and adolescent, geriatric, forensic, addictions, consultation-liaison psychiatry medicine, and/or combined specialty psychiatry training non-accredited by the ACGME. Data in this survey is presented in comparison with the previous years' reports also derived from the GME Track.

The 2019 Census has expanded considerably since the version released in 2018. Not only does it contain updated information and numbers pertinent to the last two years but also retains data in corresponding tables from 2014 to allow for comparison and observation of trends. Additionally, it now includes educational debt information and provides numbers of filled ACGME spots in General Psychiatry and Psychiatric subspecialties as a fraction of a fixed 500,000 people per state.

Readers of this document are permitted to use tables in their own scholarly work with attribution to the American Psychiatric Association.

# Introduction

## Acknowledgments

This report was made possible through the efforts of the APA Membership and Member Engagement Office and the APA Division of Education in collaboration with Drs. Sanya Virani and Tanner Bommersbach.

Special thanks to Ms. Lindsay B. Roskovensky and Mr. Tomas Massari of the AAMC GME Track for providing the APA with relevant data.

## History of the Psychiatry Resident/Fellow Census

The American Psychiatric Association first reported the demographics of the psychiatry residents in 1969 through a survey of all psychiatry residency and fellowship programs. The APA continued to survey the programs annually until 1998. In 1999, the APA collaborated with the American Medical Association (AMA) and used the AMA database of psychiatry residents to produce the 1999-2000 census report. This was done in an effort to reduce the number of data requests training directors receive as well as to assess the timeliness and accuracy of an online data collection format. Starting with the 2001-2002 report, APA's data came from the National GME Survey or GME Track, an online survey conducted by the Association of American Medical Colleges (AAMC) in collaboration with the AMA. Introduced in 2000, the GME Track is a secure web-based database that tracks and reports all residents in the United States. The database includes all the residents and fellows (of the five ACGME-recognized subspecialty fellowships in addictions, child and adolescent, forensics, geriatrics, and consultation-liaison psychiatry) as reported by the GME programs and those who matched during the National Residency Matching Program.

The APA has historically made additions to the data received from the AAMC such as verifying resident status from residency programs that did not respond to the GME Track.

# Introduction

## Methodology

This census includes selected data from publicly available resources produced by the AAMC, ACGME and NRMP databases in addition to a data grant for specific demographics from the AAMC GME Track.

GME Track® is a resident database and tracking system that was introduced in March 2000 to assist GME administrators and program directors in the collection and management of GME data. GME Track contains the National GME Census, which is jointly conducted by the Association of American Medical Colleges and the American Medical Association and reduces duplicative reporting by replacing the AAMC's and AMA's previously separate GME surveys. The National GME Census is completed by residency program directors and institutional officials. The Census is comprised of two components: the Resident Survey and the Program Survey. Resident data and program data are confirmed annually, and the survey cycle can be updated between May and February, while the GME Track application is open. This census does not include data from residency programs that did not respond to the GME Track. For GME Track data, a GME year indicates that a resident was active in training as of December 31 of that year. For example, GME year 2017 includes residents active in training as of December 31, 2017. Over the years, the methodology for collecting AAMC data on race/ethnicity has changed. Because of these changes, race/ethnicity data may not be directly comparable across time.

From academic year 2002-2003 until academic year 2012-2013, the AAMC collected race/ethnicity data in two questions—one question asked about the race or races with which an individual identified, and the other question asked about Hispanic origin. From academic year 2013-2014 to the present, the AAMC has collected race/ethnicity data in a single question that shows all of the race and Hispanic categories that an individual may select. This question allows an individual to select any combination of races and Hispanic origin.

The Accreditation Council for Graduate Medical Education (ACGME) is the body responsible for accrediting the majority of graduate medical training programs for physicians in the United States. It is a non-profit private council that evaluates and accredits medical residency and internship programs. The ACGME Data Resource Book was developed to provide an easy-to-use collection of current and historical data related to the accreditation process. The book is intended to be a concise reference for policymakers, residency/fellowship program directors, institutional officials, and others to identify and clarify issues affecting the accreditation of graduate medical education programs. For ACGME data, a year indicates an academic year time frame. For example, the year 2016 represents the 2016-2017 academic year. The National Resident Matching Program® (NRMP®), or The Match®, is a private, non-profit organization established at the request of medical students to provide an orderly and fair mechanism for matching the preferences of applicants for U.S. residency positions with the preferences of residency program directors. For NRMP data, a year indicates match data for the year listed. For example, the year 2016 represents the match data for positions offered in the year 2016.

## Key Findings

1

The number of **available match positions** in psychiatry **continues to increase**.

2

The **proportion of filled positions has increased** since 2014 and includes a **higher percentage of U.S. medical school graduates** and fewer international medical graduates than prior to 2016.

3

There has been a **reduction in the percentage of female psychiatry residents** since 2016.

4

The **racial and ethnic diversity** among psychiatric trainees **has not changed significantly** since 2016.

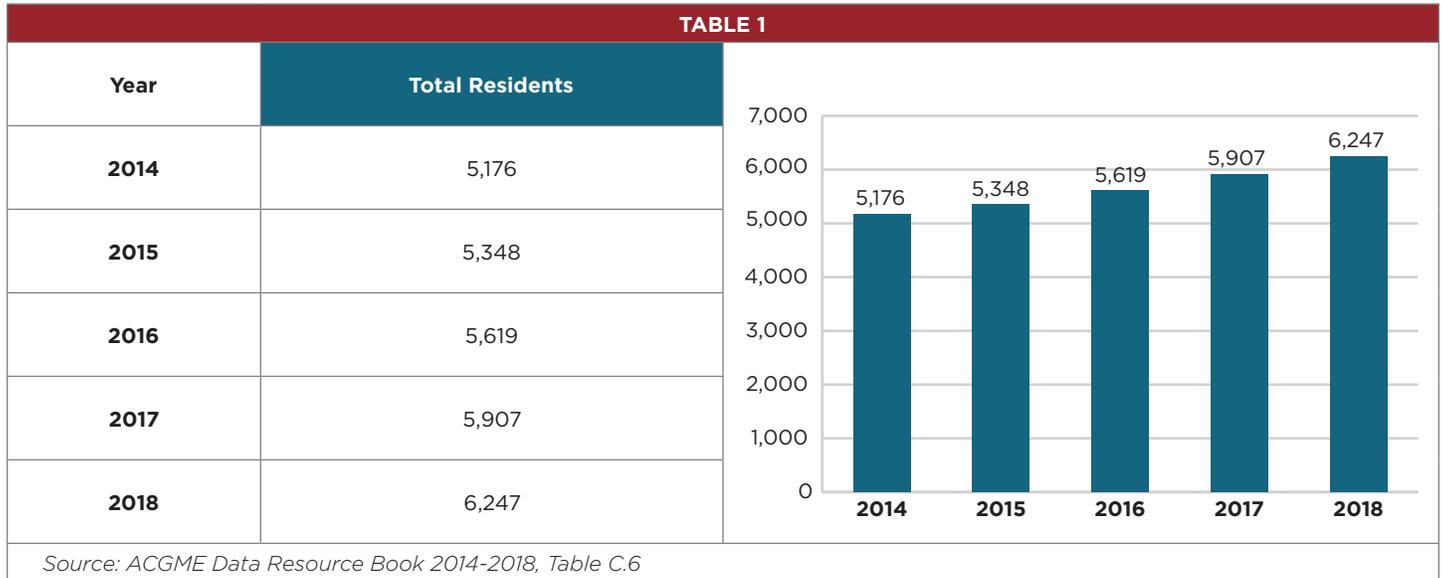

5

**Large geographic differences exist** across states in the ratio of psychiatry trainees to population.

# Total Number of General Psychiatry Residents

**Key Finding:** The total number of psychiatry residents has increased by 1,071 (20.7%) since 2014.

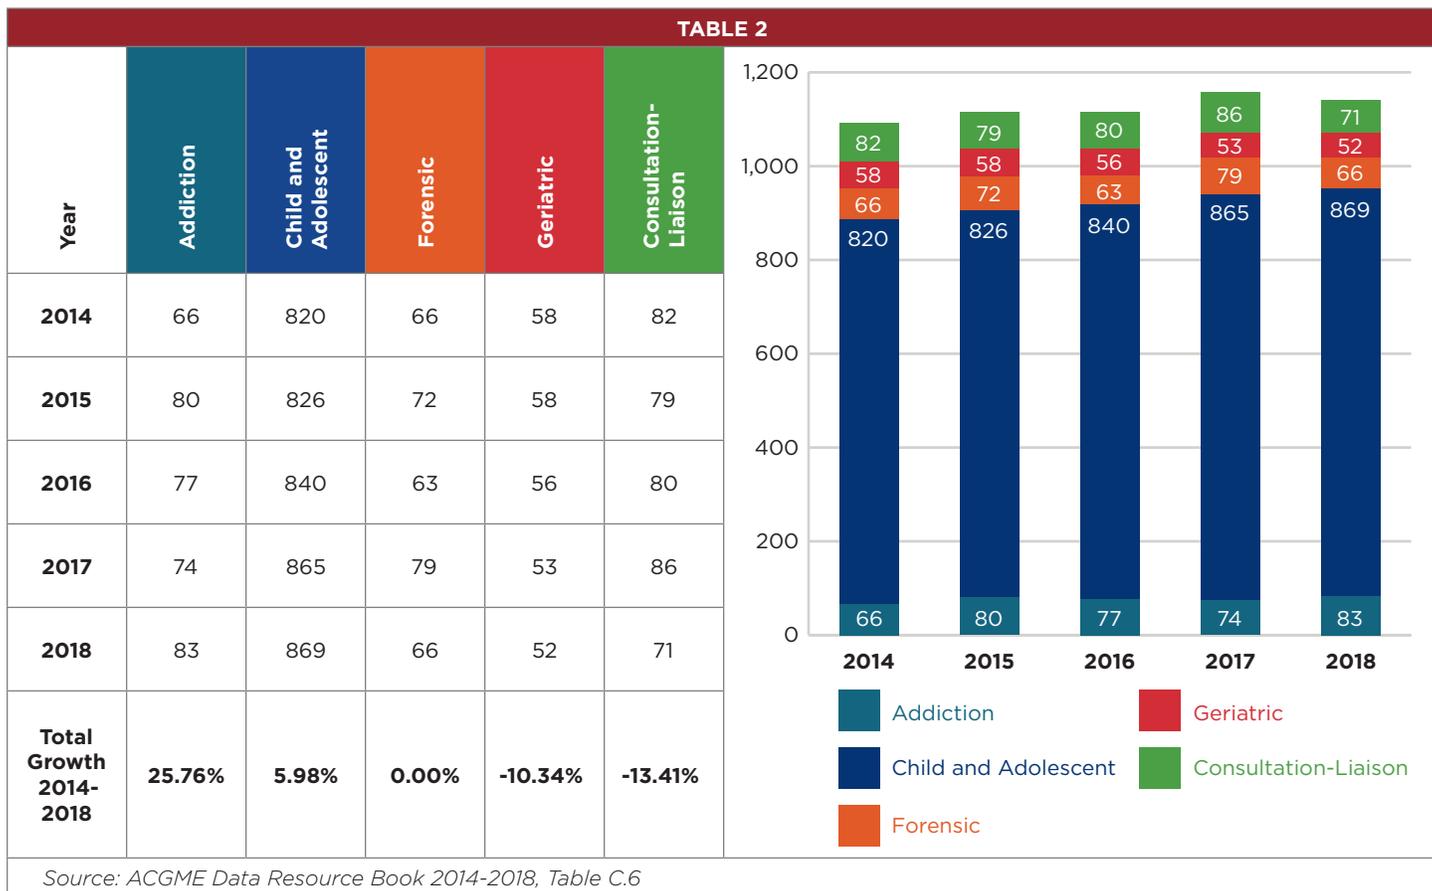

## Number of General Psychiatry Residents 2014-2018

# Psychiatry Fellows in Subspecialties

**Key Finding:** Child and adolescent continues to be the subspecialty with the largest number of trainees. Since 2014, the number of trainees in addiction psychiatry has increased 26% while geriatric psychiatry has decreased by 10%. The number of trainees in consultation-liaison had been increasing but saw a decrease of 17% between 2017 and 2018.

## Number of Psychiatry Fellows in Subspecialties 2014-2018

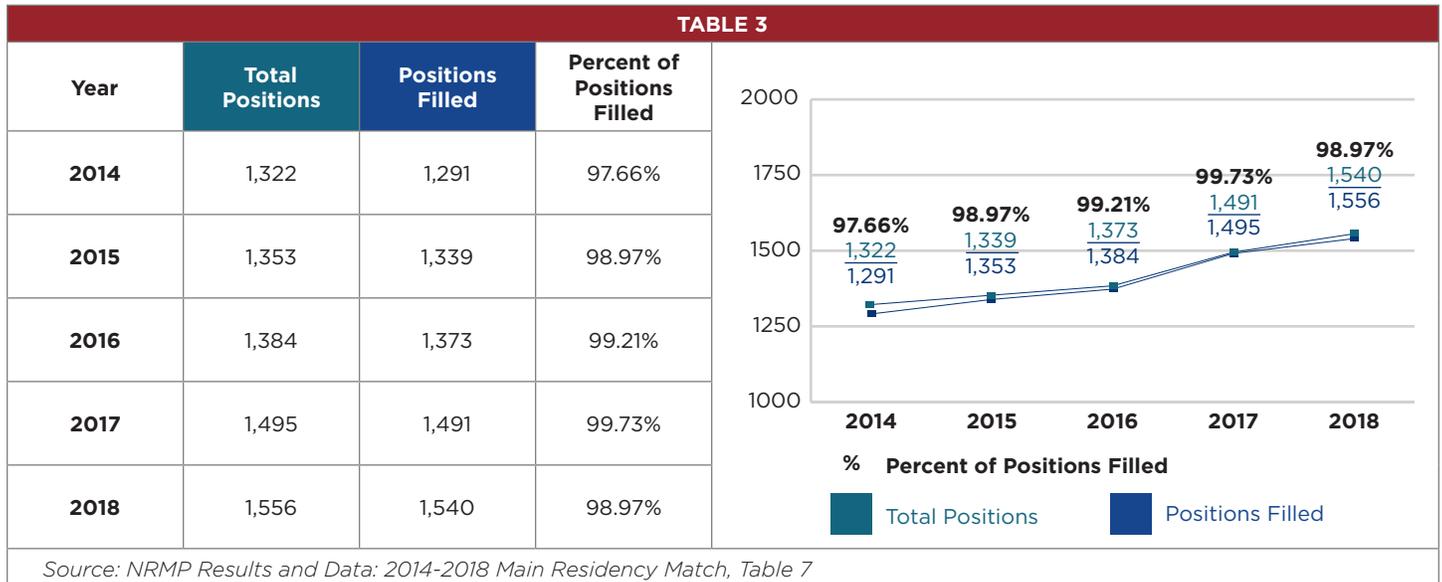

Source: ACGME Data Resource Book 2014-2018, Table C.6

# PGY1 Match Numbers

**Key Finding:** The percentage of filled positions rose to greater than 99% in 2016 and has continued at about that level for the last three years.

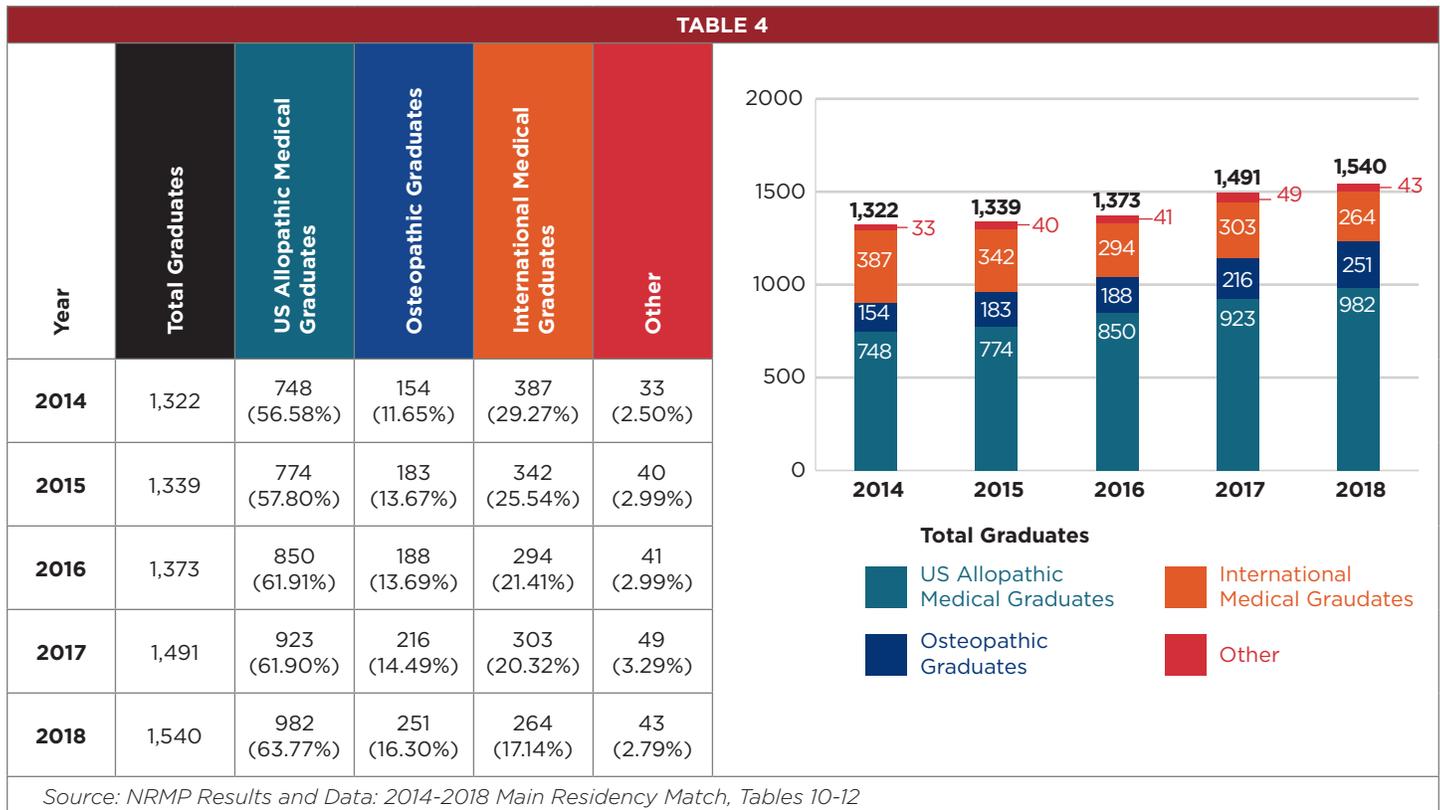

## PGY1 Positions Offered in the Match Program by Number and Percent Filled 2014-2018

# PGY1 Matches for U.S. Graduates

**Key Finding:** There was an increase in the number of PGY1 matriculants in 2018 while the percentage of international medical graduates continues to decrease.

## PGY1 Positions Filled in the Match Program by Number and Percent Filled by US Graduates 2014-2018

# Psychiatry Subspecialties by Positions Offered and Percent Filled

**Key Finding:** The percentage of filled positions continues to decrease for geriatric psychiatry.

## Accredited ACGME Psychiatry Subspecialties by Positions Offered and Percent Filled 2017-2018

TABLE 5				
Year 2017				
Subspecialty	Total Filled Complement	Total Approved Complement	Percent Filled	Total Programs
Addiction Psychiatry	83	129	64.34%	49
Child and Adolescent Psychiatry	882	1,105	79.82%	138
Consultation-Liaison Psychiatry	90	143	62.94%	60
Forensic Psychiatry	84	123	68.29%	47
Geriatric Psychiatry	59	155	38.06%	60
Year 2018				
Subspecialty	Total Filled Complement	Total Approved Complement	Percent Filled	Total Programs
Addiction Psychiatry	85	132	64.39%	50
Child and Adolescent Psychiatry	883	1,132	78.00%	140
Consultation-Liaison Psychiatry	78	144	54.17%	62
Forensic Psychiatry	73	127	57.48%	48
Geriatric Psychiatry	52	157	33.12%	61

# General Psychiatry Residents by Sex

**Key Finding:** The percentage of reported female residents has decreased since 2014.

## General Psychiatry Residents by Sex 2014-2018

**TABLE 6**

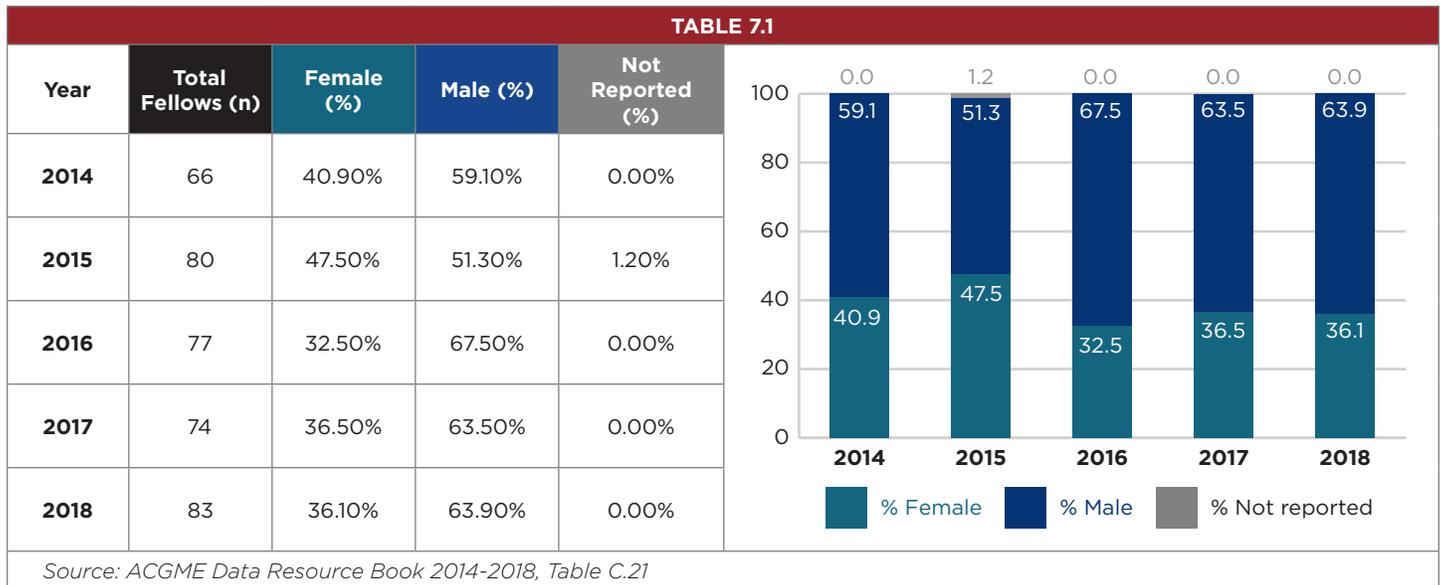

Source: ACGME Data Resource Book 2014-2018, Table C.21

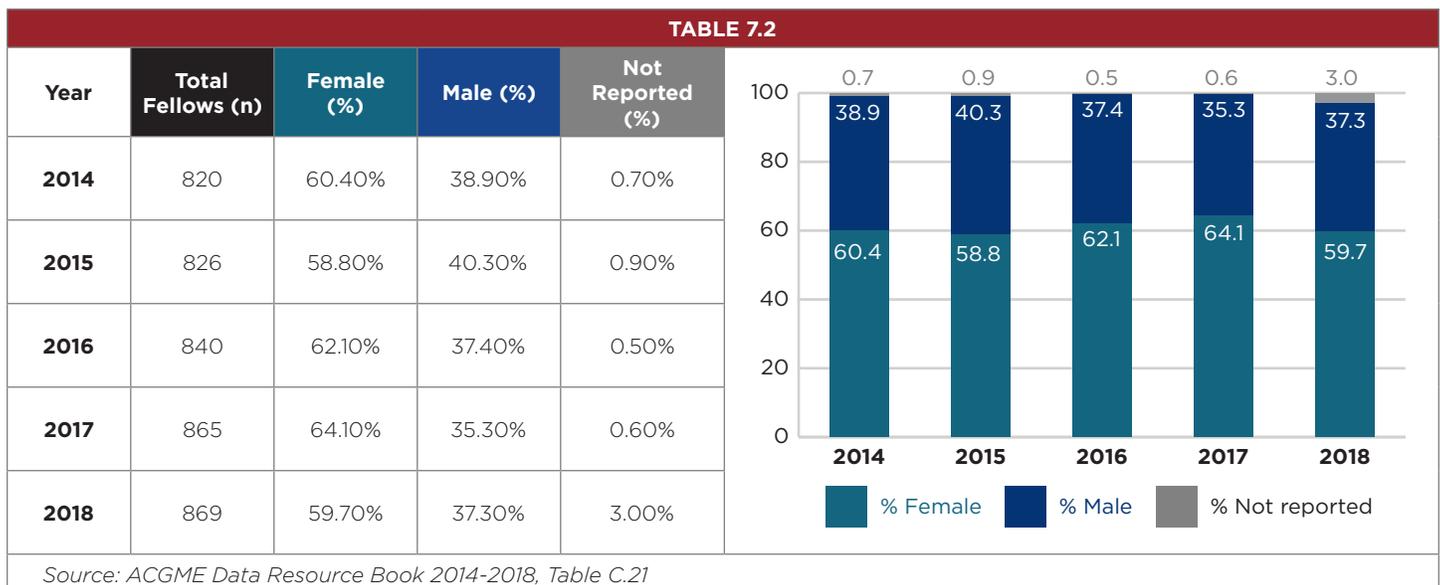

# Psychiatry Subspecialties by Sex

**Key Finding:** The following tables illustrate the sex differences within the five psychiatric subspecialties. There continues to be a large female vs. male gap in some fellowships, with more males in addiction fellowships and more females in child and adolescent and geriatric fellowships.

## Psychiatry Addiction Fellows 2014-2018

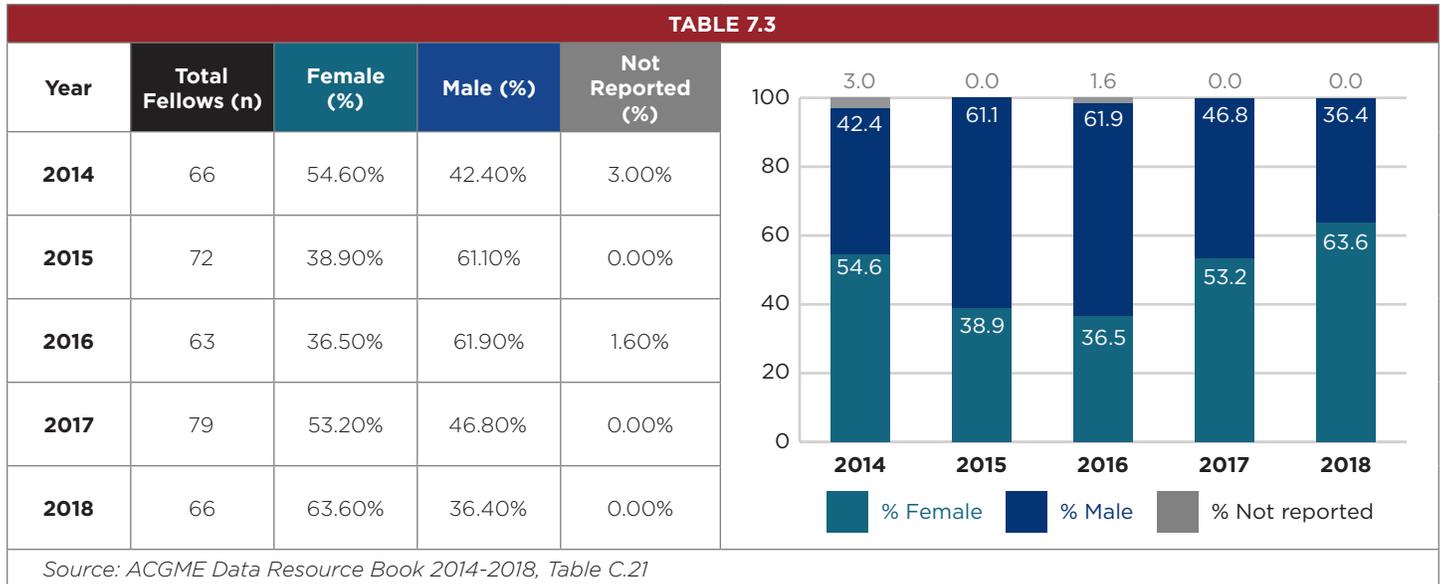

## Psychiatry Child and Adolescent Fellows 2014-2018

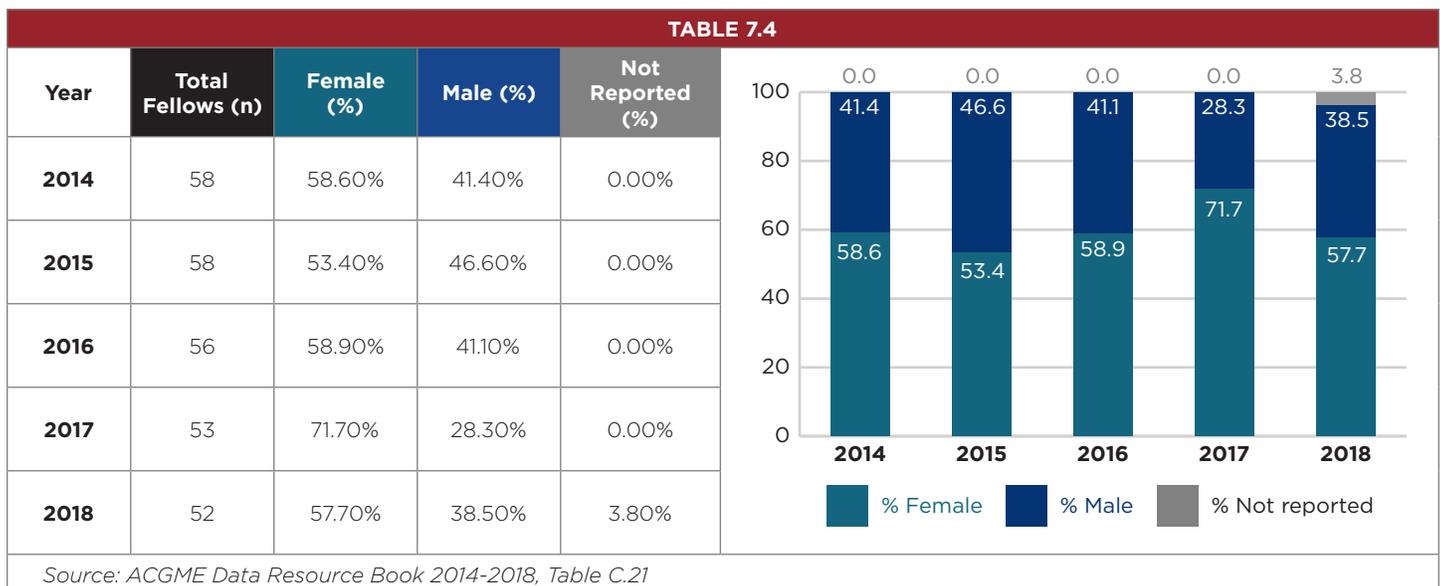

# Psychiatry Subspecialties by Sex

## Psychiatry Forensic Fellows 2014-2018

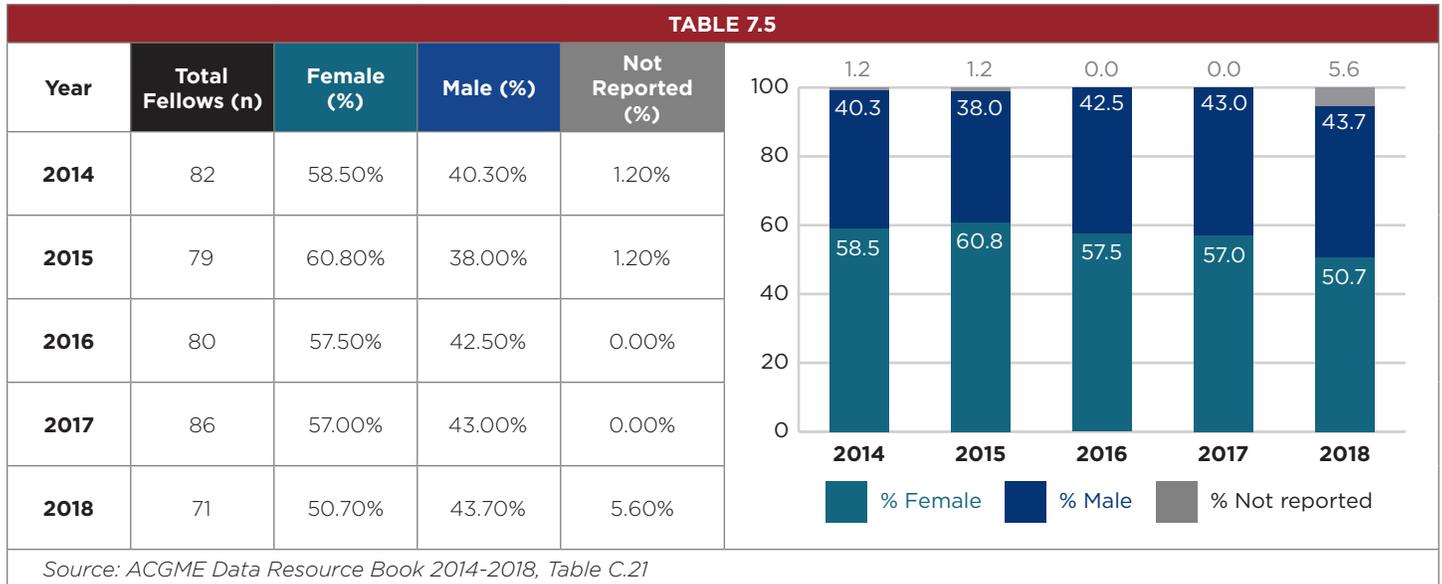

## Psychiatry Geriatric Fellows by Sex 2014-2018

# Psychiatry Subspecialties by Sex

## Psychiatry Consultation-Liaison Fellows by Sex 2014-2018

# Psychiatry Residents by Race & Ethnicity, GME Track Data

**Key Finding:** There are no clear trends in the data resulting from the impact of efforts to increase diversity. The largest categories are White and Asian, and together represent over three-fourths of PGY1 psychiatry residents. The third largest category, Non-U.S. Citizen and Non-Permanent Resident, represents residents who lack citizenship by birth right or naturalization and may include students with unknown citizenship. Fewer than 10% of residents self-identify as Black/African American and Hispanic/Latino/Spanish Origin and less than one percent self-identify as American Indian/ Alaskan Native or Native Hawaiian/Other Pacific Islander.

## General Psychiatry PGY1 Residents by Race & Ethnicity 2014-2018

TABLE 8.1

Duplicated Race/ Ethnicity <sup>1</sup>	2014		2015		2016		2017		2018	
	N	%	N	%	N	%	N	%	N	%
American Indian or Alaska Native	7	0.51%	10	0.71%	11	0.75%	13	0.85%	10	0.63%
Asian	327	24.03%	295	20.94%	318	21.59%	376	24.69%	386	24.28%
Black or African American	95	6.98%	91	6.46%	94	6.38%	123	8.08%	96	6.04%
Hispanic, Latino, or of Spanish Origin	100	7.35%	96	6.81%	129	8.76%	135	8.86%	135	8.49%
Native Hawaiian or Other Pacific Islander	3	0.22%	2	0.14%	3	0.20%	4	0.26%	5	0.31%
White	672	49.38%	744	52.80%	781	53.02%	793	52.07%	827	52.01%
Other	56	4.11%	51	3.62%	62	4.21%	52	3.41%	48	3.02%
Unknown Race/ Ethnicity	2	0.15%	7	0.50%	7	0.48%	7	0.46%	8	0.50%
Non-U.S. Citizen/ Non-permanent Resident <sup>2</sup>	191	14.03%	201	14.27%	209	14.19%	157	10.31%	213	13.40%
<b>Number of Unique Residents</b>	<b>1,361</b>	<b>100.00%</b>	<b>1,409</b>	<b>100.00%</b>	<b>1,473</b>	<b>100.00%</b>	<b>1,523</b>	<b>100.00%</b>	<b>1,590</b>	<b>100.00%</b>

Source: AAMC Data Report

<sup>1</sup> Duplicated Race & Ethnicity indicates the resident identified with that race/ethnicity category alone or in combination with any other race/ethnicity category. For example, a resident who identified as Asian, Native Hawaiian or Other Pacific Islander, and white is counted three times, in each of the three categories. Therefore, the sum of the counts and percentages in the categories may be greater than the counts and percentages shown in the Number of Unique Residents row.

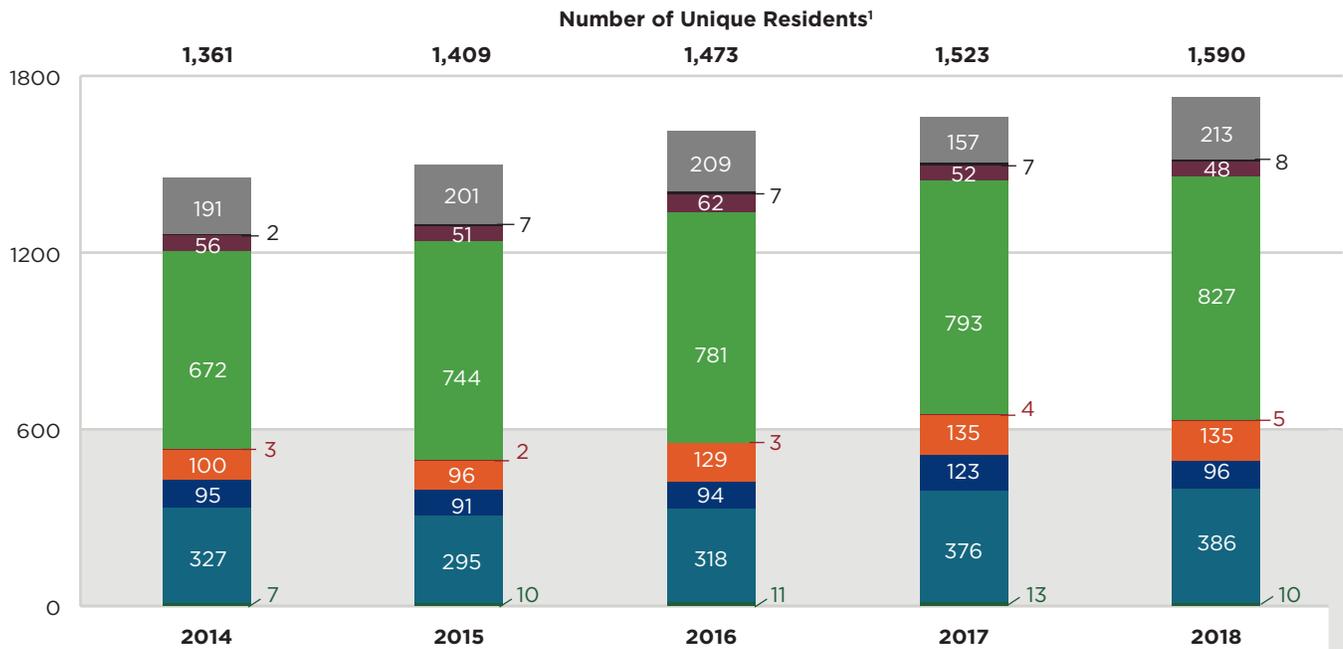

<sup>2</sup> Non-US Citizen/Non-permanent resident category does not pertain to race and ethnicity.

Note: Counts and percentages are slightly different than the 2018 Census Report (typically less than .1%)

# Psychiatry Residents by Race & Ethnicity, GME Track Data

**Number of Unique Minority and Underrepresented Residents**

<sup>1</sup>Duplicated Race & Ethnicity indicates the resident identified with that race/ethnicity category alone or in combination with any other race/ethnicity category. For example, a resident who identified as Asian, Native Hawaiian or Other Pacific Islander, and white is counted three times, in each of the three categories. Therefore, the sum of the counts and percentages in the categories may be greater than the counts and percentages shown in the Number of Unique Residents row.

<sup>2</sup> Non-US Citizen/Non-permanent resident category does not pertain to race and ethnicity.

Note: Counts and percentages are slightly different than the 2018 Census Report (typically less than .1%)

# Psychiatry Residents by Race & Ethnicity, GME Track Data

**Key Finding:** The largest categories, White and Asian, together represent nearly three-fourths of psychiatry residents. The third largest category, Non-U.S. Citizen and Non-Permanent Resident, represents residents who lack citizenship by birth right or naturalization and may include students with unknown citizenship. Consistently, less than one percent of residents self-identify as American Indian/Alaskan Native or Native Hawaiian/Other Pacific Islander. There have been minor fluctuations in levels of Black/African American and Hispanic/Latino/Spanish Origin categories since 2014, indicating a lack of a consistent trend.

## All General Psychiatry Residents by Race & Ethnicity 2014–2018

# Residents and Fellows by Type of Medical School Training

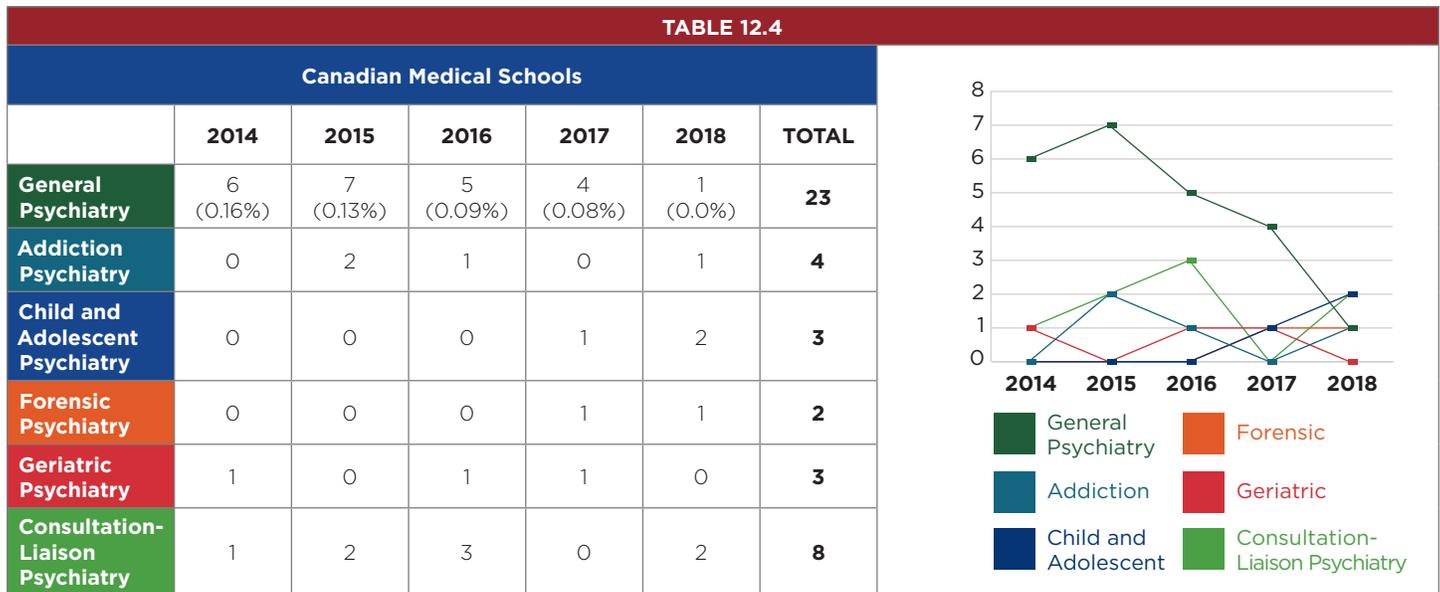

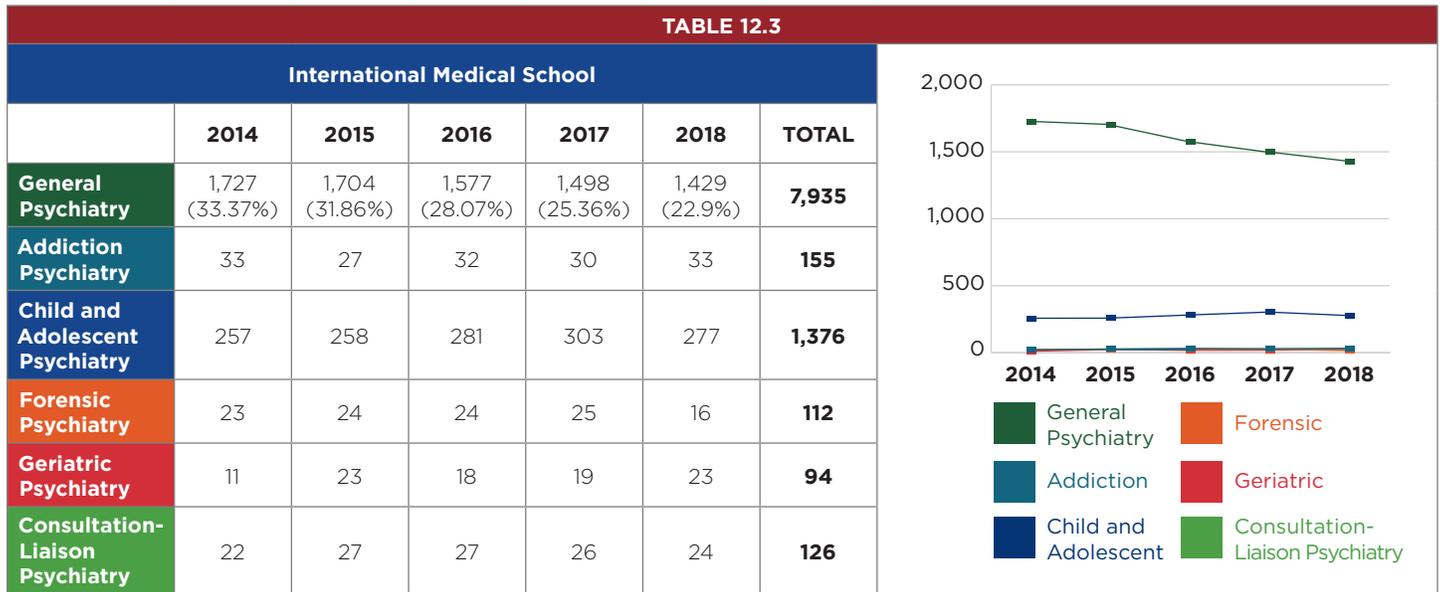

**Key Findings:** The percentage of active general active psychiatry residents who graduated from US LCME Accredited medical schools continues to increase while the percentage from international medical schools continues to decrease. Notably, there has been a 68.3% increase in the number of residents from US Osteopathic Medical schools in General Psychiatry from 2014-2018 due to the initiation of a unified accreditation system.

## Number of Residents in General Psychiatry and Subspecialty Fellowships by Medical School Training 2014-2018

# Residents and Fellows by Type of Medical School Training

## Number of Residents in General Psychiatry and Subspecialty Fellowships by Medical School Training 2014-2018

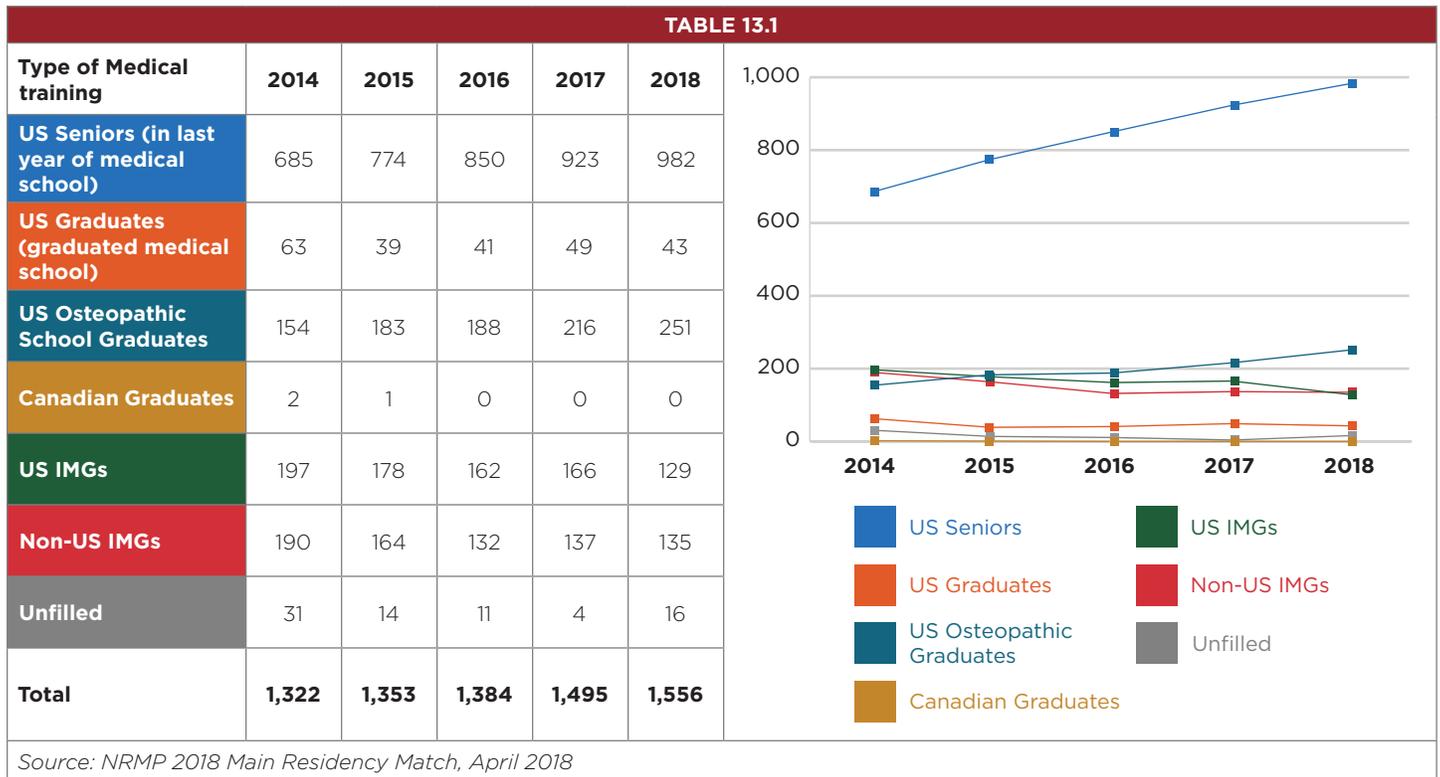

Source, Tables 12.1 - 12.4: ACGME Data Resource Book 2014-2018, Table C.15

# Psychiatry Position in Match by Medical Training

**Key Findings:** There has been an increase in the number of US seniors (in last year of medical school) matching into Psychiatry. The proportional percentage of US IMGs and non-US IMGs has decreased over the 6-year span.

## Psychiatry (Categorical) Positions in Match by Type of Medical Training 2014-2018

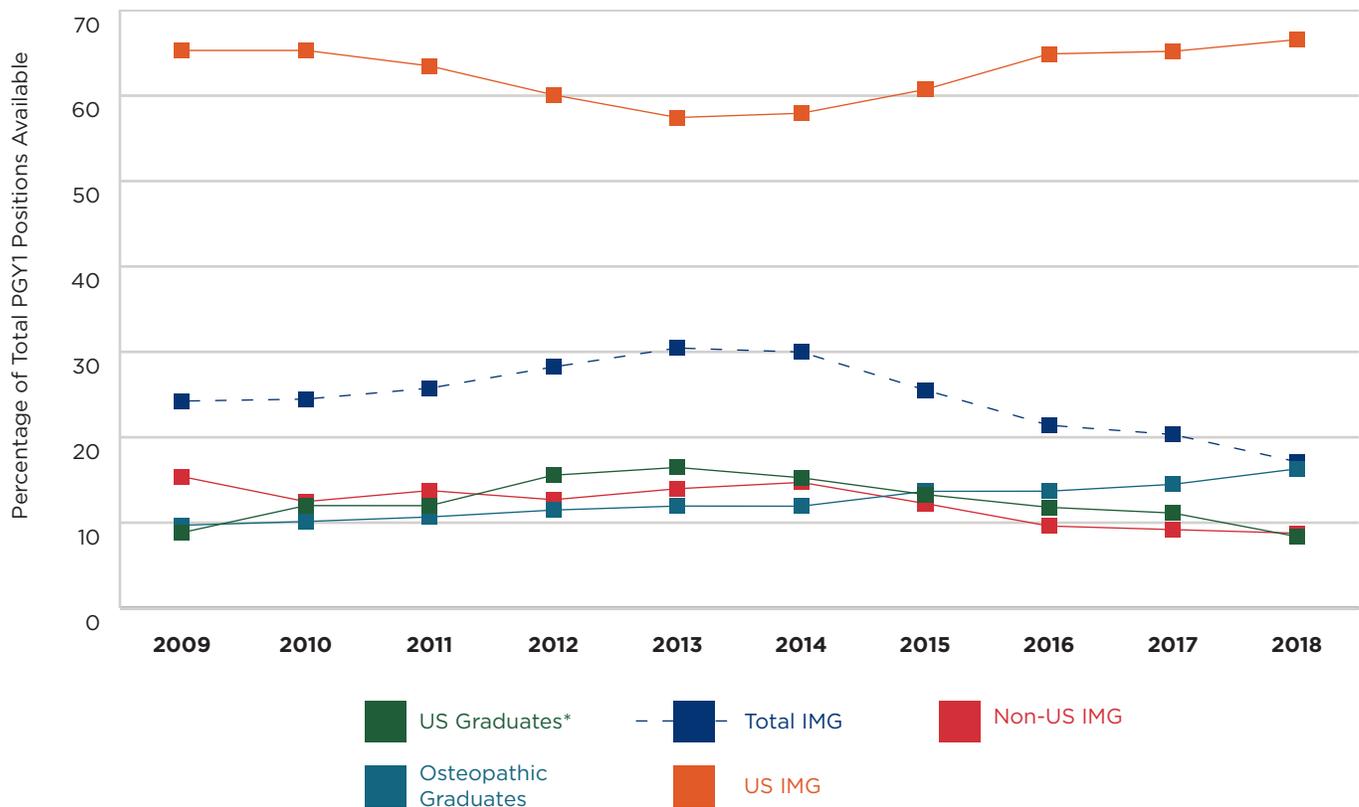

# Psychiatry Position in Match by Medical Training

**Key Findings:** The number of IMG physicians matching into psychiatry residency has decreased considerably over the past decade. In 2010, 25% of the matched PGY-1 psychiatry residents were foreign-trained. In 2013, the percentage of IMG physicians reached a 10-year peak of 30%, then decreased steadily to just 17% in 2018.

## PGY-1 (Categorical) Psychiatry Matches by Applicant Type, 2009-2018

TABLE 13.2

Type of Medical Training	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018
US Graduates*	65.30	65.30	63.48	60.09	57.44	57.94	60.72	64.89	65.19	66.56
US IMGs	8.84	12.00	11.99	15.56	16.47	15.26	13.30	11.80	11.13	8.38
Osteopathic Graduates	9.70	10.14	10.67	11.48	11.95	11.93	13.67	13.69	14.49	16.30

Non-US IMG	15.40	12.47	13.76	12.69	13.98	14.72	12.25	9.61	9.19	8.77

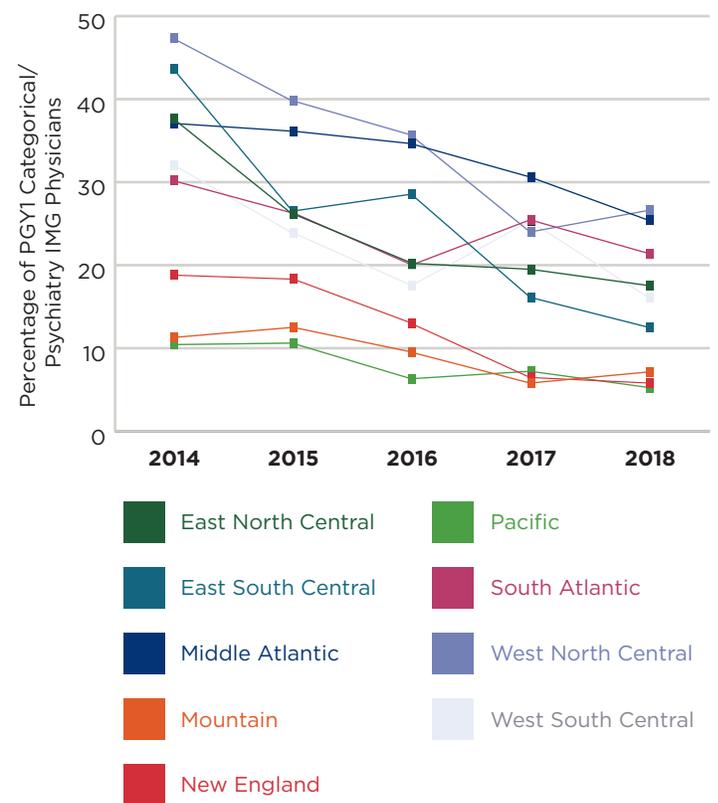

# Psychiatry Position in Match by Medical Training

**Key Findings:** The regions with the highest percentages of IMG physicians matching into PGY-1 positions were the West North Central (27%) and Middle Atlantic (25%), and the regions with the lowest percentages of IMG physicians were the Pacific (5%) and New England regions (6%). Over time, the percentage of IMG physicians matching into categorical PGY-1 positions has decreased in each of the nine regions. The greatest decreases from 2014 to 2018 occurred in the East South Central (72%) and New England (62%) regions. Although they both declined during the five-year period, the South Atlantic (29%) and Middle Atlantic (32%) regions were least affected.

## Percentage of International Medical Graduates Matching into PGY-1 Psychiatry Positions by US Census Region, 2014-2018

TABLE 13.3

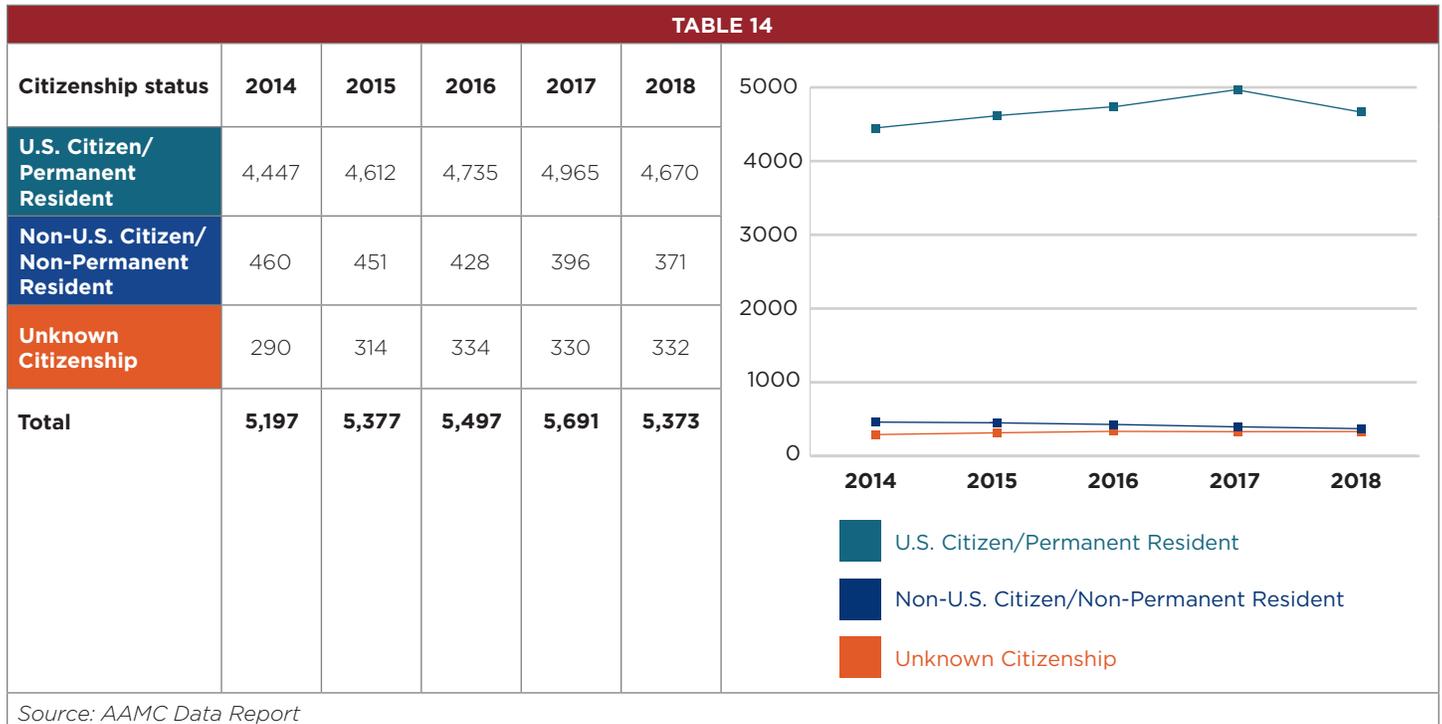

Region	2014	2015	2016	2017	2018
East North Central	37.65	26.16	20.22	19.51	17.54
East South Central	43.64	26.53	28.57	16.13	12.50
Middle Atlantic	37.08	36.14	34.63	30.62	25.39
Mountain	11.29	12.50	9.52	5.80	7.14
New England	18.80	18.32	12.98	6.47	5.80
Pacific	10.43	10.61	6.32	7.22	5.26
South Atlantic	30.18	26.29	20.00	25.46	21.40
West North Central	47.31	39.78	35.64	24.00	26.61
West South Central	32.09	23.88	17.52	25.32	16.05

# Citizenship Status for all Active Psychiatry Residents

**Key Findings:** There has been a decrease in the number of non-US/non-permanent psychiatry residents between 2014-2018.

## Overall Citizenship Status for Psychiatry Residents 2014-2018

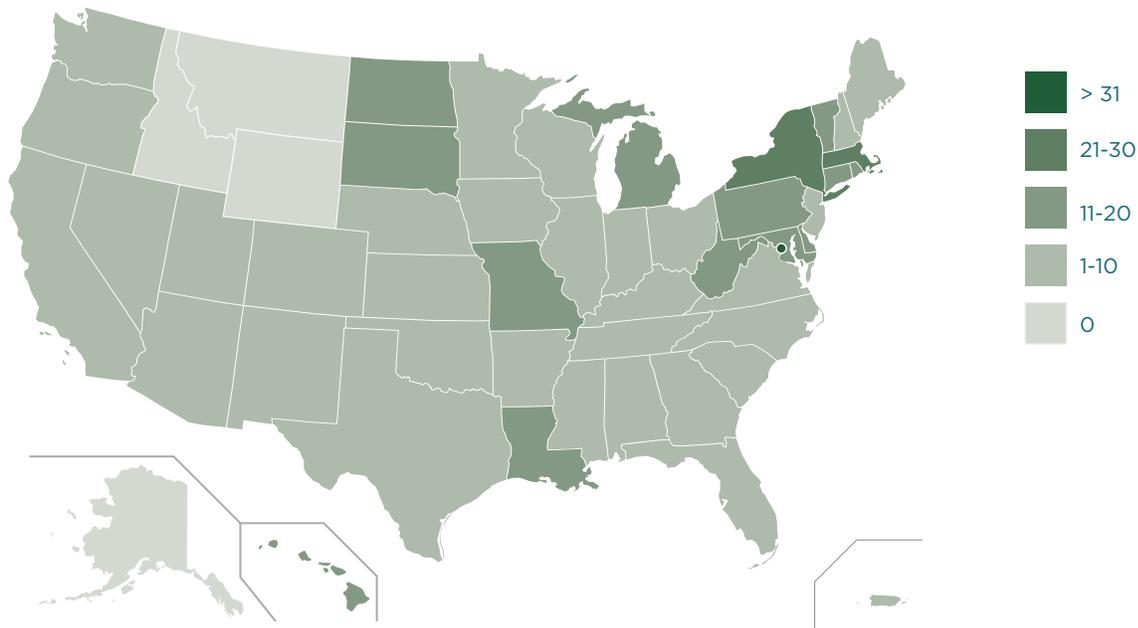

# Filled ACGME Spots in General Psychiatry

**Key Findings:** There are large differences across states in the number of psychiatry trainees per capita. The District of Columbia, New York, and Massachusetts have the largest number of per capita trainees while parts of the southern and western U.S. tend to have very low numbers of per capita trainees.

## Number of Filled ACGME Spots in General Psychiatry per 500,000 People by State, 2018

# Filled ACGME Spots in General Psychiatry by APA Area

**Key Findings:** There are large differences across states in the number of psychiatry trainees per capita. The District of Columbia, New York, and Massachusetts have the largest number of per capita trainees while parts of the southern and western U.S. tend to have very low numbers of per capita trainees. Consistently across all states, there are a very few number of psychiatric subspecialty trainees per capita.

## Number of Filled ACGME Spots in General Psychiatry per 500,000 People by APA Area, 2018
